

DEEP SURFACE

SPACIA

About Spacia

Spacia is a self-contained, full size, orthopaedic double bed that installs into a floor cavity and can be deployed at the push of a button.

Created initially to meet the needs of the emerging 'micro flat' building sector, Spacia is a unique design giving you a fully made permanent bed which sits entirely under the floor when not in use.

Your choice of covering materials allows you to create true multi-function living spaces without compromise.

An ideal product for integration into any new build or private renovation project, Spacia can add a bedroom to virtually any property - turn a studio into a luxury apartment and a study or playroom into a spare bedroom all at the touch of a button!

Spacia has one last trick up its sleeve; when opened the head board can hide away paraphernalia of life or your working day leaving a tranquil, uncluttered sleeping space.

About Deep Surface

Deep Surface Ltd. began as the result of work undertaken at the London based Royal College of Art. The concept was simple:- to design modern temporary use furniture that can be simply deployed and put back in seconds without the need for complex user operation.

With space an ever-increasing premium in urban environments the Deep Surface team focuses on innovative, design-led practical solutions to in home storage and multiple use contemporary furniture.

Deep Surface is proud to offer an increasing line of products to fulfil this zero-space furniture philosophy and is using wherever possible the very best of British manufacture in their production.

One such product is Spacia.
